

Consultant and manufacturer
of equipment for cemeteries
and crematoria

honor[®]
Piëteitstechniek

Consulting manufacturer

We have to go back to 1946 to find why HONOR Piëteitstechniek B.V. was established. Events in this year created the desire to provide more dignified ceremonies. This desire resulted in the establishment of HONOR by Willem Westerweel in 1948.

Willem Westerweel as the founder developed the Company until 1957 when his son, Leo Westerweel, took over the management. In 1990 Jon Westerweel (Willem's grandson) became the third generation to take over the reins of the Company. HONOR Piëteitstechniek has grown from these family roots to offer consultancy and many types of equipment that assist in the provision of dignified ceremonies at cemeteries and crematoria. HONOR Piëteitstechniek is your innovative and ambitious partner for optimal, safe and practice based solutions.

“Professionalism and know-how”

Target groups...

Owners of cemeteries, crematoriums and funeral directors form HONOR Piëteitstechniek's target groups. The Company provides equipment that guarantees safe working conditions before, during and after the ceremony, as well as optimizing the logistics process. All the equipment is ergonomic, user-friendly and rugged. Constant innovation of products ensures that our customers are always able to provide a dignified ceremony. Since first inception it has been a corner stone of HONOR Piëteitstechniek marketing approach to retain contact with all users and customers of our equipment. Our contact and sincere interest in our customers has led to a thorough understanding of your requirements and this has resulted in innovative solutions.

Our quality...

- Manufacturer with direct understanding of the end-users needs.
- Our knowledge and experience allows the development of products and solutions that are properly devised, innovative, safe, practical and user-friendly.
- All HONOR products are manufactured in our own factory.
- All products are guaranteed for durability of components.
- Solutions are provided by direct communication.
- HONOR Piëteitstechniek has supplied both solutions and equipment to the bereavement service industry since 1948.

Our work...

HONOR dynamic and creative approach is always finding improvements and innovation to our products and services. We are ambitious and are constantly reviewing the demands and wishes of our customers. This knowledge coupled with a sharp-eye, creative attitude to problems and a sound knowledge of product techniques and application of materials assists us in our pursuit of excellence.

With over 60 years of experience and a background in mechanical engineering, HONOR Piëteitstechniek is very active in our specialized field.

For us, professionalism and expertise form the basic principles of our business philosophy. This philosophy and our multidisciplinary and expert workforce have a proven track record of providing practical and technically innovative solutions to international standards and regulations.

HONOR is ISO-9001 (quality), ISO-14001 (environment) and VCA (safety) certified. Our extensive practical experience with many leading global organizations, carefully structured expert and motivated workforce in partnership with our customers continues to allow us to provide practical and innovative solutions.

All over the world...

Thanks to a carefully compiled network of experts, we are expanding our activities all over the world. HONOR Piëteitstechniek interest in ideas from all over the World ensures that our solutions are up to date, innovative and unique!

Innovation...

To translate the innovative power of HONOR's practical situations into customer-oriented solutions and services we have always deployed our expertise at targeted solutions, which over the years have lead to a range of new, specialised products. This has resulted in most HONOR products being modular in design, so that they can easily be combined with each other.

Product development and

Since 1948 we have designed and produced our products on the basis of customer needs. Our product development is a partnership between the ideas of our customers and the expertise of our workforce.

All solutions developed are thoroughly tested and mainly manufactured on our own premises. For this purpose, HONOR employs modern production equipment such as CNC controlled milling and turning machines, impulse MIG and TIG welding equipment and a paint spraying cabin.

Periodic examination & Product approval

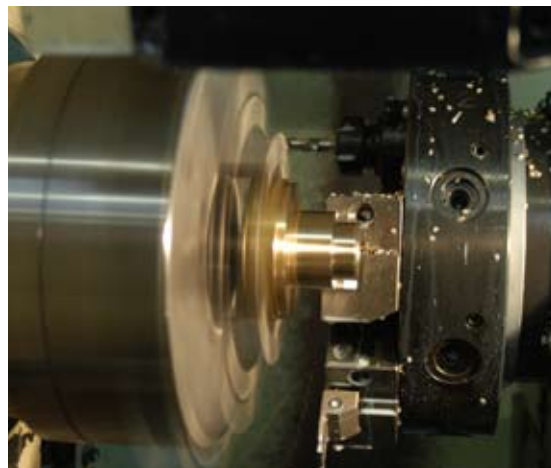

All solutions offered by HONOR are supported by a reliable state of the art Service Management System. Maintenance and periodic examination of the products plays an important role in providing optimal functionality and safety while in use and ensures the reliability of the equipment.

“We supply hard copy or digital certificates of maintenance after periodic examinations!”

Periodic examinations have to be done by authorized and competent examiners. It is essential to test your equipment, at least annually, and get it approved. Test protocols have been developed during the years and are stated in our ISO-9001 Quality Control procedures.

manufacturing

HONOR 'Service Management System'

A complete registration on the service and examination of your (safety) equipment is essential! HONOR has developed a computerized 'Service Management System' where every product that is sent to our customers is registered. Every 12 months after delivery, on serial number level, it shows which products have to be re-examined. Of course it is up to the product owner to decide to examine the products or not.

On site inspection and certification

We can carry out inspections and certification in the specially designed HONOR test facilities at Almere or on your own premises, whichever suits you best. HONOR's Service Department has a fully equipped service fleet and our inspectors are trained to provide

you with on the spot advice. On completion of the inspection you will receive a printed and/or digital certificate!

Our product range

HONOR continuously improves and renews its products and services. Customer requirements and HONOR's ambitions, in accordance with international rules and regulations drive the provision of our solutions.

HONOR deliberately specializes in just a few product groups. This interest and focus combined with specialist know how allow us to provide total solution that are safe and meet your needs.

“Honor develops, manufactures, markets and maintains all of its products.”

Grave shuttering

Shuttering systems made from aluminum ensure that graves cannot collapse while digging and during the ceremony itself! The 'stepped' design introduced by HONOR offers safe working conditions during the whole process while digging, at the ceremony and when the grave is re-filled.

The lightweight and strong grave shuttering systems are practical and adaptable for both machine and manual grave digging.

Gang Grating & Grave Covering

Aluminum gang grating provide the bearers, relatives and others involved, security while working and standing at the edge of an open grave.

Our products modular designs can be used in combination or separately. All the various working grids and grave coverings including the Coffin/Casket Lowering Device and the 'Green Window'

combine easily. The modular HONOR solutions are well designed, safe and professional and provide excellent presentation at the graveside.

Coffin and Casket Lowering Device & Green Window

The Coffin Lowering Device allows the coffin to descend into the grave in a manner which is dignified, ergonomic and pleasing to the eye regardless of the weather. Both the Lowering Device and the Green Window are mechanical (lightweight), operate automatically and are adjustable in size! The simple operation of the Lowering Device (descending or stopping) allow family members to control the interment process.

Portable & trolley biers

HONOR offers a range of solutions to transport the coffin in the church, cemetery or crematorium and from there to the grave or cremator.

Carrying or driving the coffin? It is normally up to the next-of-kin to make this decision. Even a personalized shroud (with photo's, poems, paintings, skyline, etc.) around the bier is possible! A shroud with personalized images including photographs, pictures, poems, etc, can be attached.

Hall & mortuary layouts

HONOR is specialists in providing morgue refrigeration units in accordance with your own designs, transport facilities, cooled lying in state, furnishing of family rooms. The final layout design is determined in conjunction with the customer and an architect (if required).
